

Dobwalls & Trewidland Parish Neighbourhood Plan

As part of the Neighbourhood Plan consultation process we delivered a general survey to all households within the Parish.

The exhibition today is a summary of what you said you wanted. Detailed copies of the survey results are available to take away. If you wish to have your say you can still find the survey online using the link at the bottom of this page.

Survey Response

Of the 1022 paper surveys distributed, 231 were returned using the freepost envelope. An additional 27 were completed online using SurveyMonkey. In total, there were 258 responses.

Gender Breakdown

More women than men completed the survey with 62% of respondents being female and 38% male. This shows an over representation of female responses compared with the 2011 Census gender statistics for the Dobwalls and Trewidland Parish (female 51.5%: male 47.5%).

Women ■ Men ■

Age Range

The great majority of people who completed the survey were aged 30 years or over, with the majority of respondents falling between the ages of 30-64 (55.1%). Sadly no-one under the age of 18 completed the survey. Efforts are being made to reach our young people through schools and community groups.

Age range

■ 30-64
■ 18-29
■ 65+

There is still time to take part in our online survey:

Dobwalls & Trewidland Parish Neighbourhood Plan

Because the Neighbourhood Plan has a relatively long shelf life, considerations like the shifting demographics of the Parish and the prevalence of long term illness are just two of the many things that need to be planned for.

Predicted age structure of population by 2035

People with Limiting Long Term Illness (LLTI)

Dobwalls & Trewidland Parish Neighbourhood Plan

From your survey responses and other Neighbourhood Plan consultation exercises a number of key issues and opportunities have been identified which we hope will help to guide us when we come to draft our Neighbourhood Plan Policies

Population and Health Issues and Opportunities

Issues

- Increasing numbers of individuals and households fall into older age groups.
- The number of households with younger working families and children is reducing.
- General health in both adult and child populations is worsening.

Opportunities

- Ensure that new development encourages the numbers of young people and families in the Parish.
- Encourage more active lifestyles.
- Create attractive outdoor and indoor opportunities for social interaction and active leisure for all age.

The benefits of improved physical activity go well beyond physical health and well-being. The association with psychological well-being is now well established and the potential for physical activity to play its part in managing the growing challenge of mental ill health is significant.

Physical activity can also reduce the risk of depression and dementia, both of which have a high prevalence. In Cornwall and Isles of Scilly, approximately 27,000 adults have a diagnosis of depression and over 5,000 adults have a diagnosis of dementia.
